Copernicus Emergency Management Services

Complementary to national efforts

Providing European wide information to the EU's Emergency Response and Coordination Centre (ERCC)

Knowledge exchange on emergency management for disaster risk at European level

Focus on Europe but available globally

Copernicus Emergency Management Services

Early Warning & Monitoring Systems

European Forest Fire & Global Wildfire Information Systems (EFFIS & GWIS)

Near real-time & historical information on forest fires & forest fire regimes

European & Global Drought Observatory

Drought monitoring and forecasting

European & Global Flood Awareness Systems (EFAS & GloFAS)

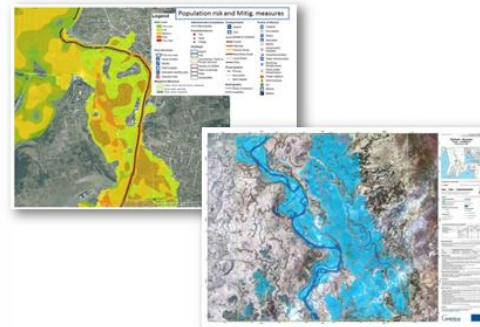

Flood monitoring and forecasting

On-demand Mapping

Rapid Mapping

24/7 on-demand and fast provision of geospatial information

Risk & Recovery Mapping

On-demand GI supporting prevention, preparedness, disaster risk reduction, reconstruction, recovery

EFAS – European Flood Awareness System

- Provide complementary, added value flood early warning & monitoring products to improve the preparedness and emergency response of relevant stakeholders
- different forecasting & monitoring products (probabilistic, multi-ensemble, medium-range flood forecasts, flash flood indicators, radar nowcasting, etc.)
- impact forecasting (possible consequences of predicted events, e.g. flood extent, population affected)

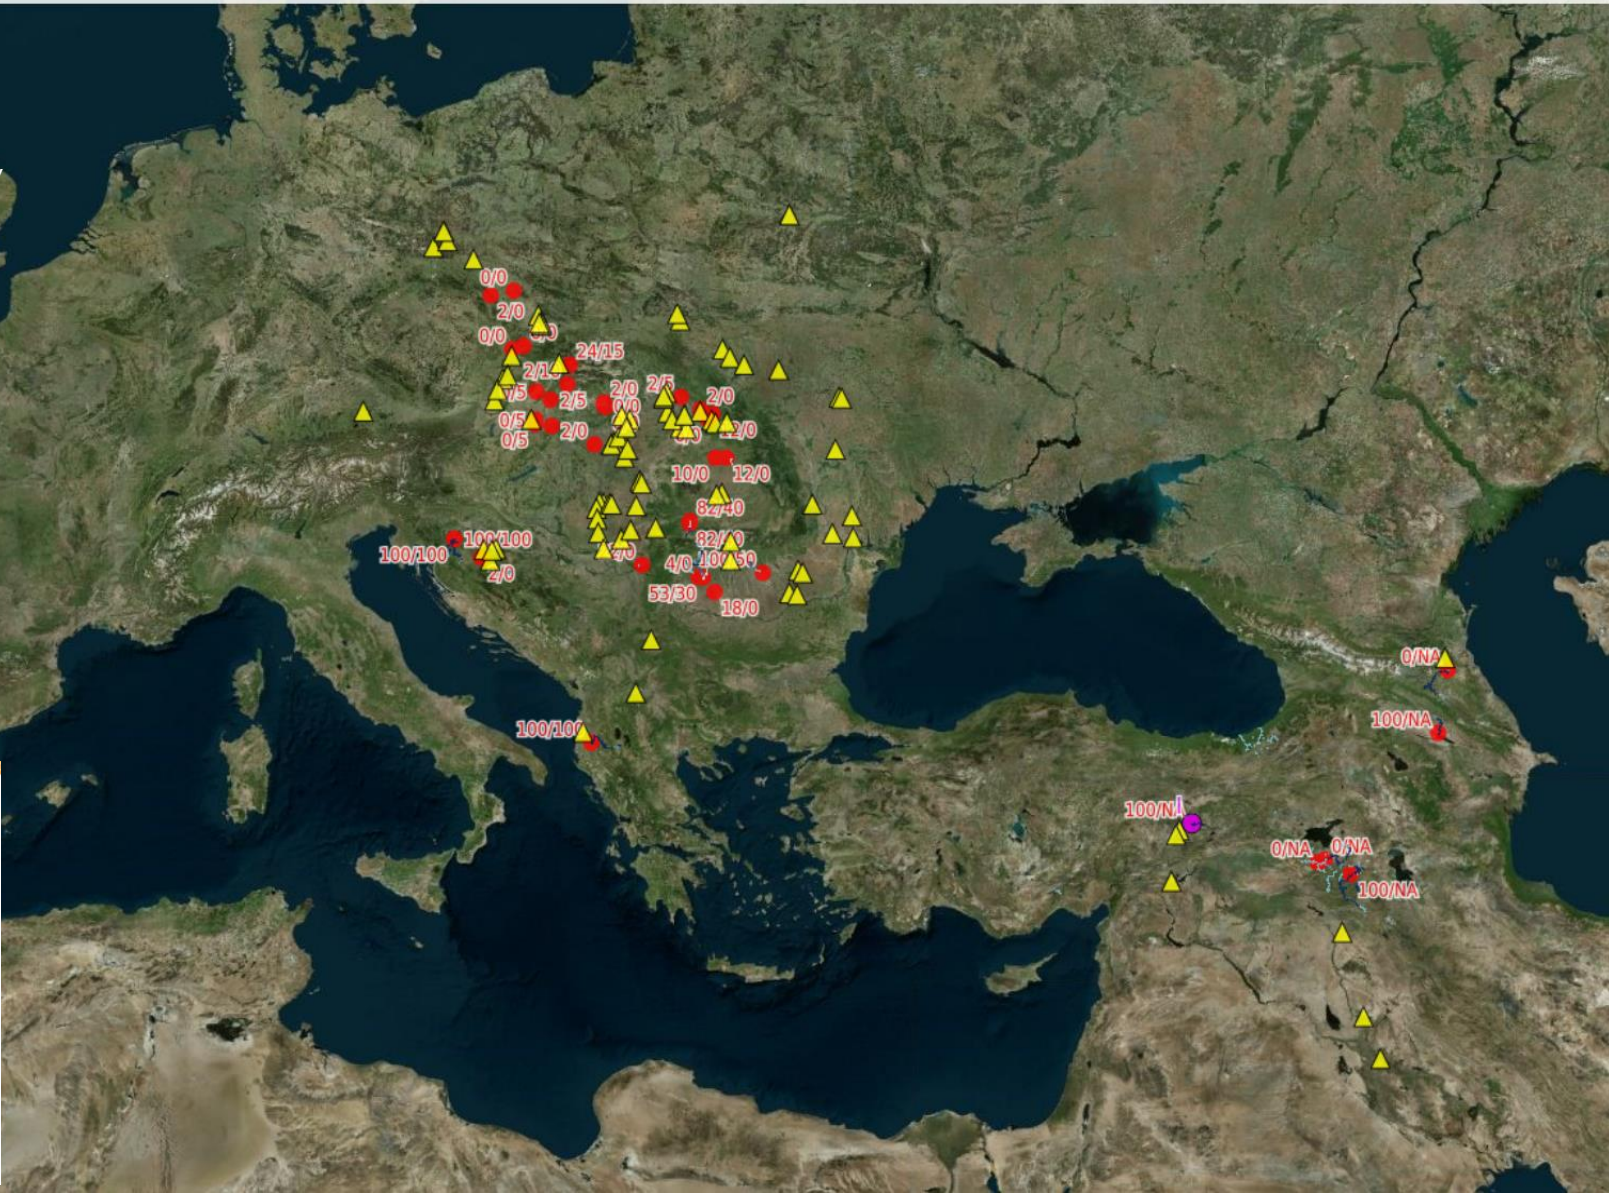

Report an Error

Population Affected

	Low impact ≤ 100	Medium impact 100 - 1000	High impact ≥ 1000

Agricultural surfaces [ha]	90	90

GloFAS – Global Flood Awareness System

Return Period Hydrograph (ECMWF-ENS)

Preparedness

Response

Recovery

Isn't it perfect???

What can go wrong???

"The Seine river is rising. 2pm in Paris, Pont Neuf. More flooding coming!"

`{'country_conf': 0.96474487, 'country_predicted': 'FRA', 'geo': {'admin1': 'Île-de-France', 'country_code3': 'FRA', 'feature_class': 'A', 'feature_code': 'ADM2', 'geonameid': '2968815', 'lat': '48.8534', 'lon': '2.3486', 'place_name': 'Paris'}, 'spans': [{'end': 5, 'start': 0}], 'word': 'Paris'}`

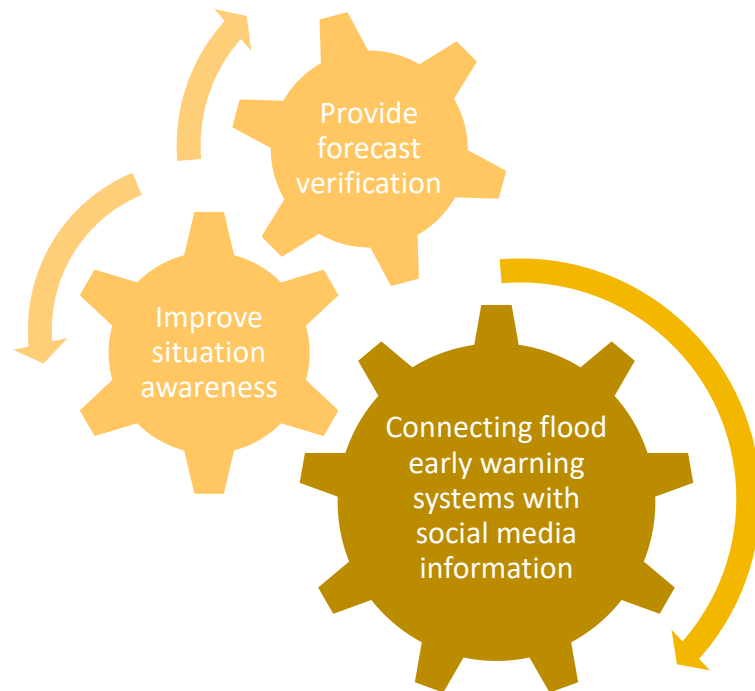

On a side note...among us...by the way... If only ALL the tweets were like these...

Preparedness

Response

Recovery

social media analysis (passive,
general-purpose user contributions)

Social and mainstream media
monitoring can provide early
information and data on hazardous
events at large scale

crowdsourcing (active, targeted
contributions requested by
emergency responders)

There were not yet
approaches able to
provide seamless and
reliable integration of this
information with existing
forecasting, monitoring
and mapping tools

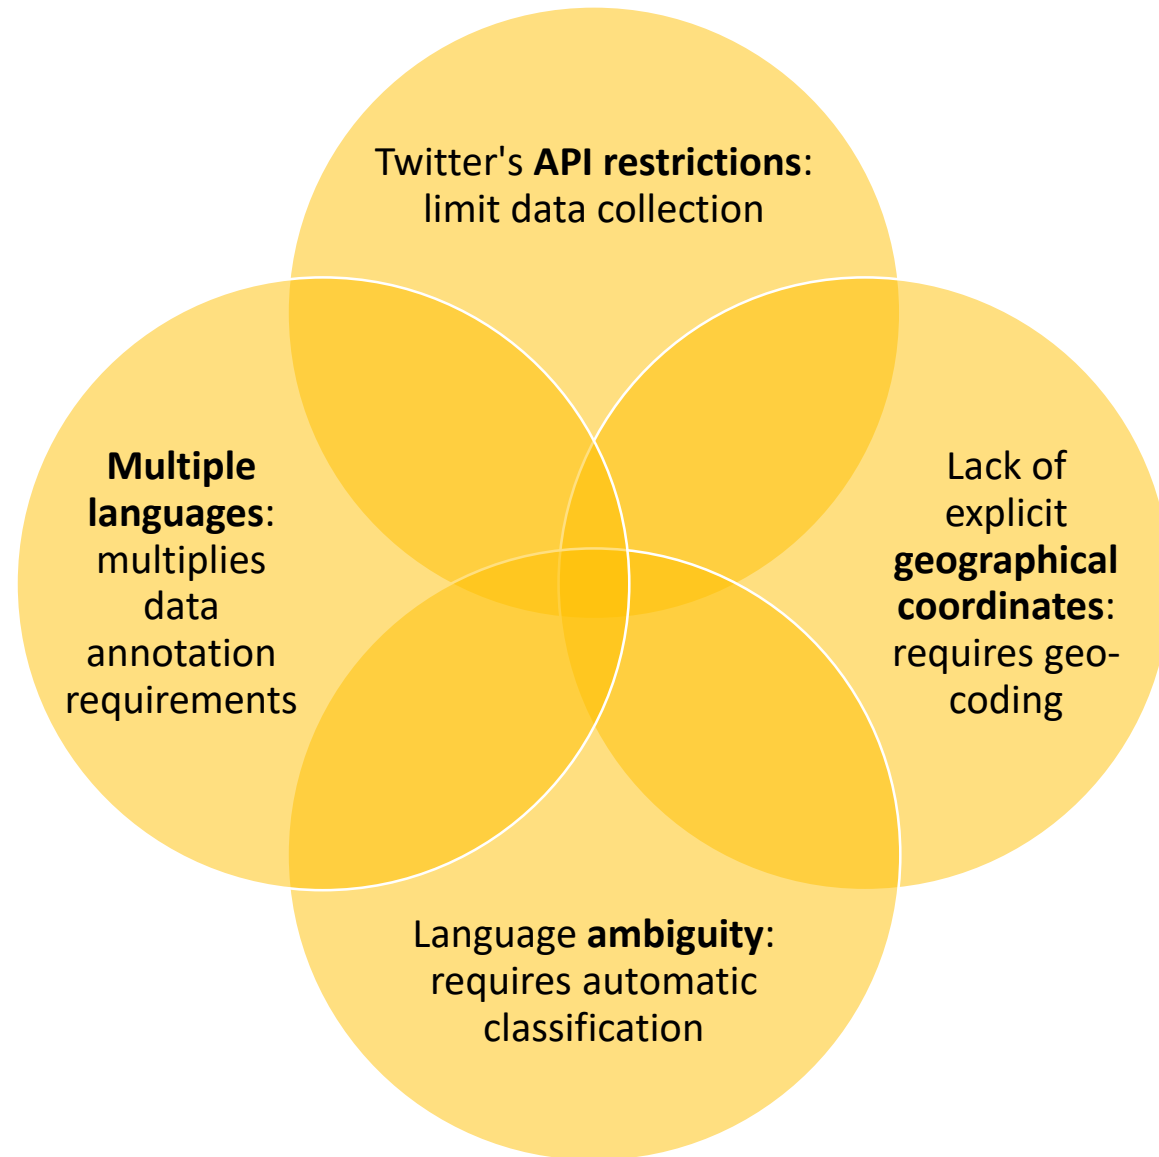

It is difficult to provide
multilingual coverage
coherent with CEMS
domains

It is difficult to process
data in a time frame
appropriate for
emergency
management.

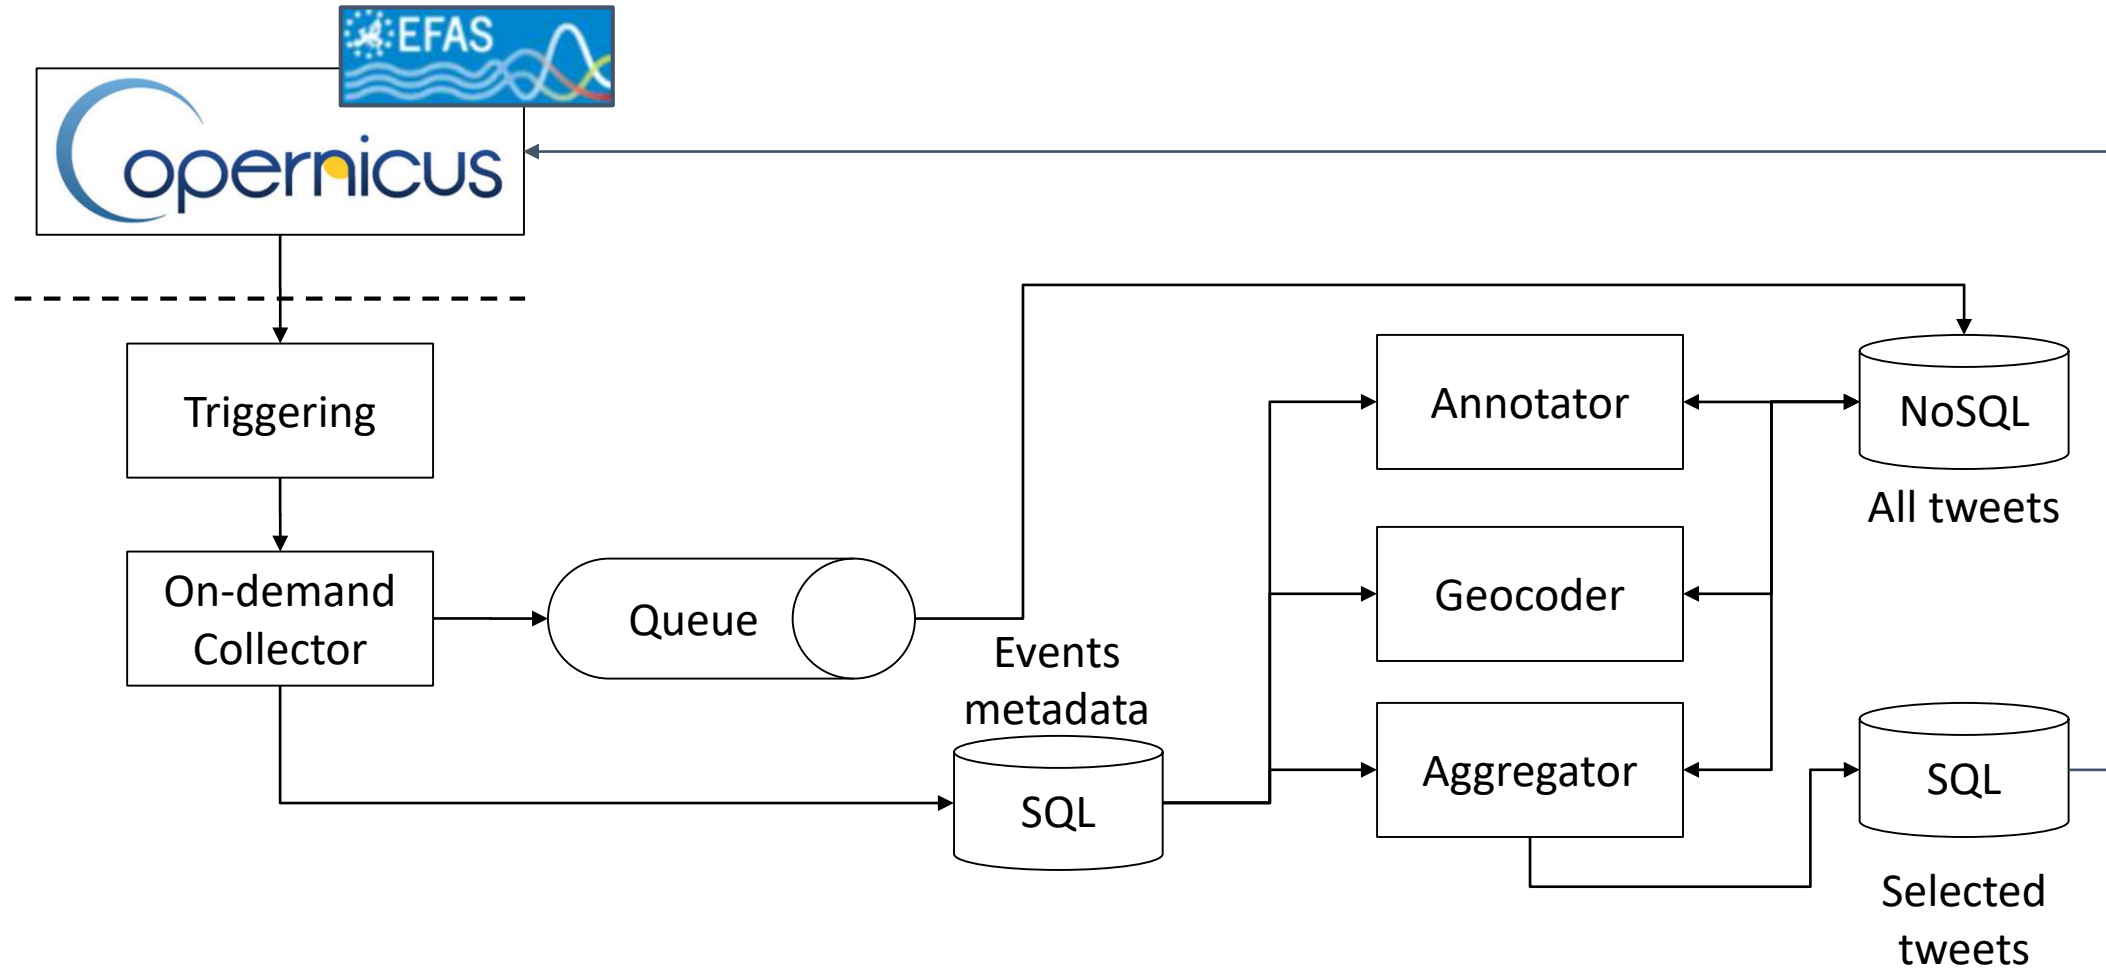

SMFR

Main technical challenges

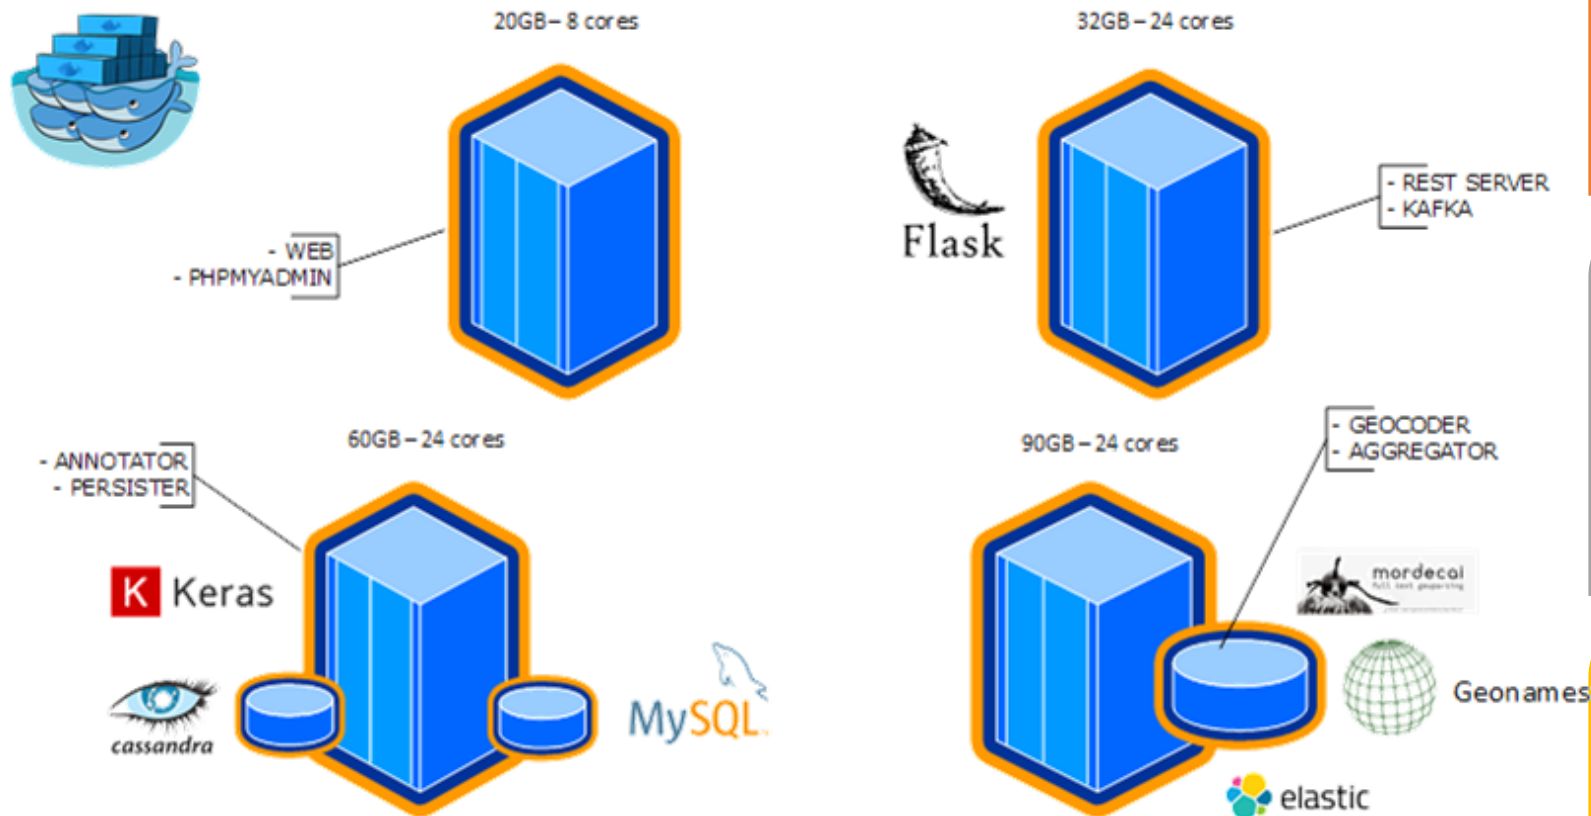

SMFR architecture

System infrastructure

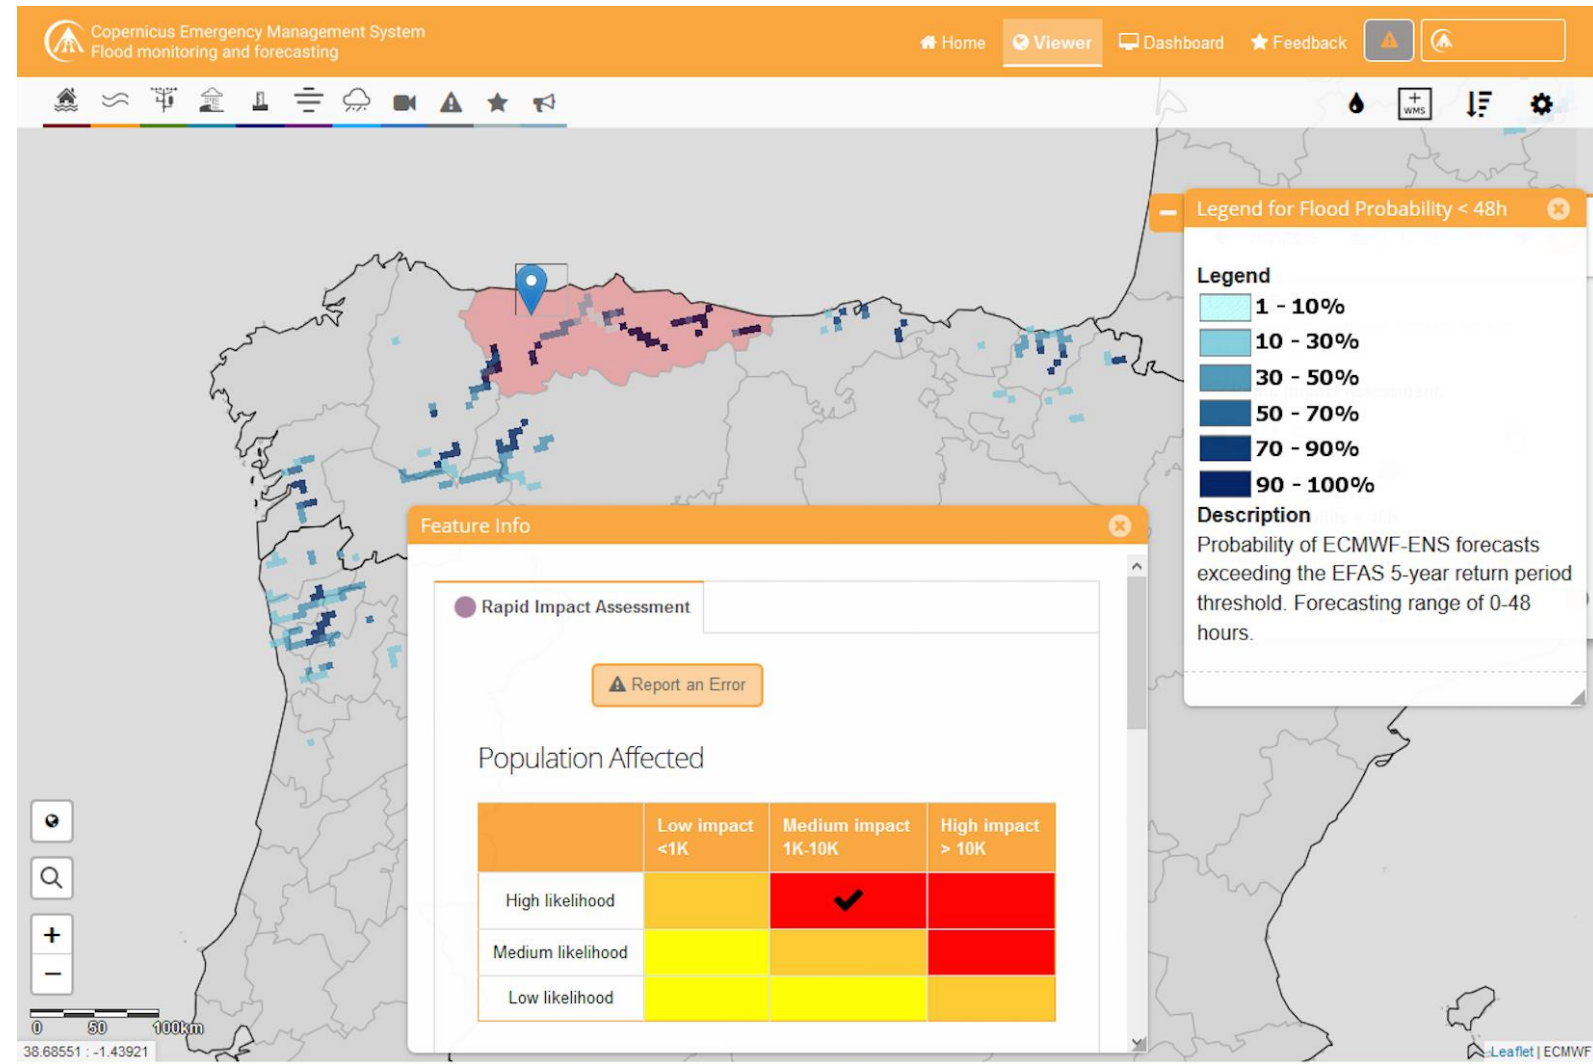

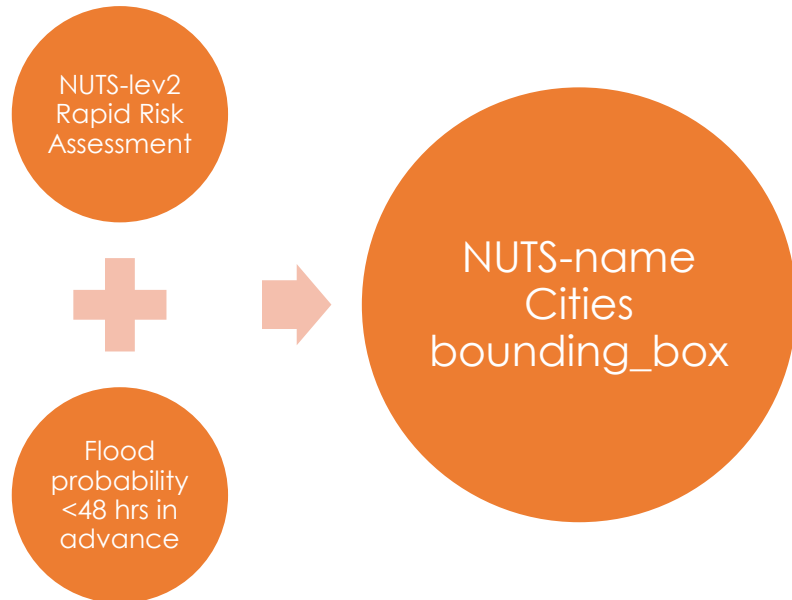

Deployment in a Docker Swarm SMFR – 4 Nodes

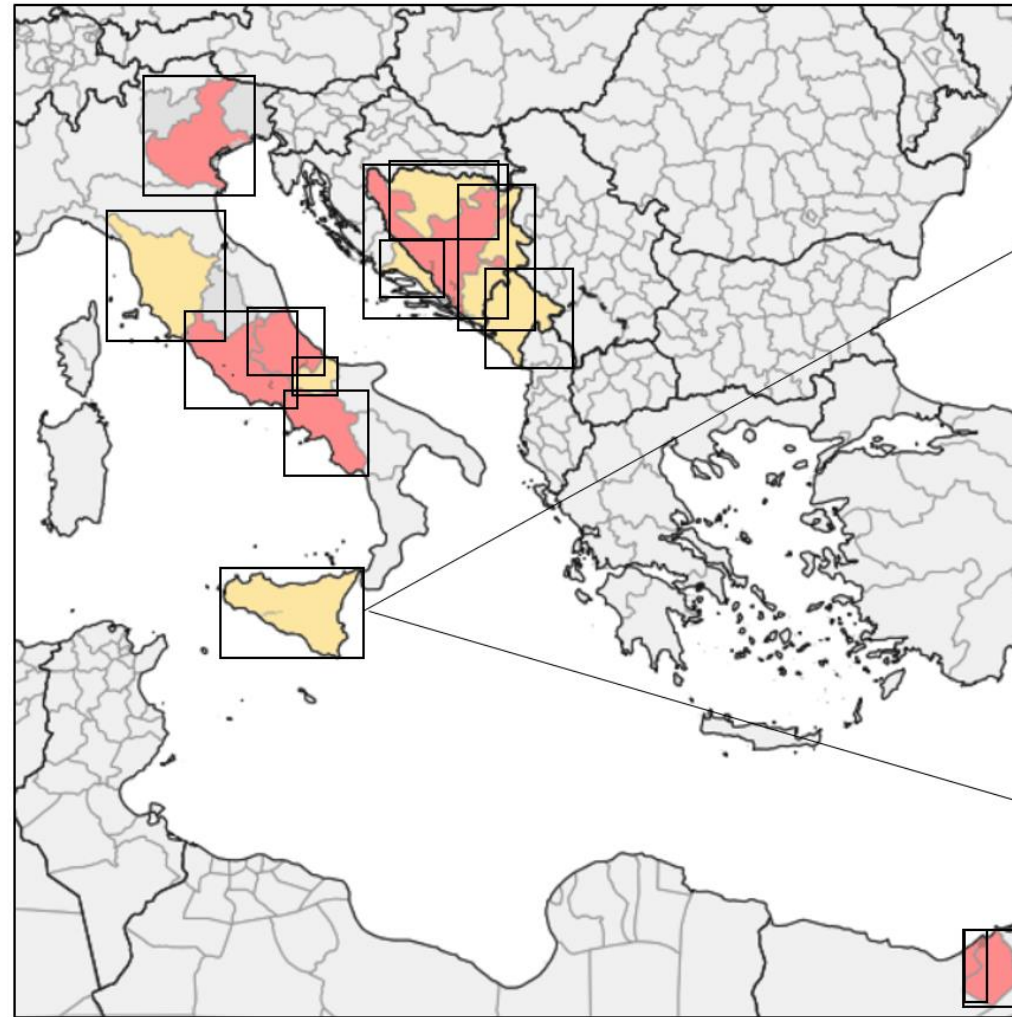

Architecture based on a "facade" REST SERVER and micro services which expose start/stop operations.

Asynchronous persistence to Cassandra leveraging on Kafka queues.

Development phases and deployment are based on containers. We use an internal Docker SWARM of 4 nodes.

Deployment

Case Study: Calabria Floods in October 2018

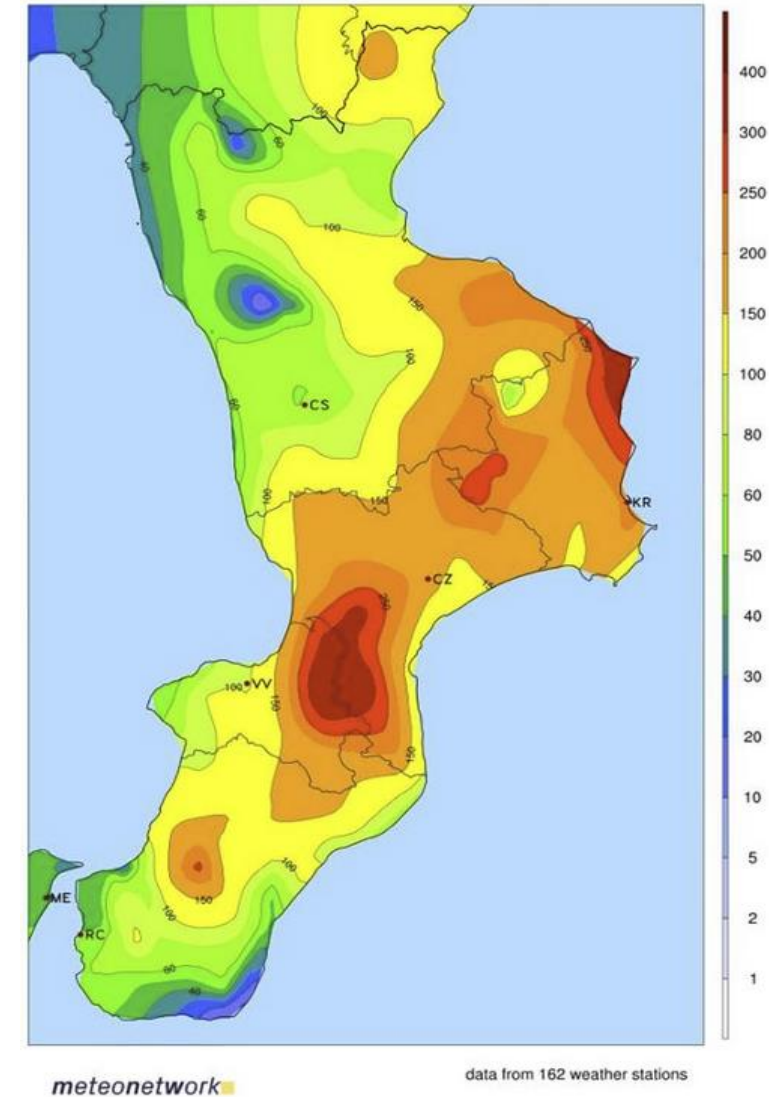

- EFAS forecasted a potential flood in the Calabria NUTS-2 area on the 4th of October with a predicted peak time of the event for the following day.

Several families were forced to evacuate their homes and people were rescued after they climbed onto the rooftops of houses to escape the flooding.

Italian news agency ANSA, stated that the Ponte delle Grazie bridge on provincial highway 19 in the area collapsed during the storms (Redazione ANSA [2018](#)).

Vigili del Fuoco, Italy's National Firefighters Corps, reported major flooding in Ciro Marina, Petilia de Policastro, Strongoli, Cotronei and Isola di Capo Rizzuto.

Precipitazioni totali 2-5 ottobre 2018 (mm)

SMFR triggered a collection with a duration of 2 days that was later extended for an additional day due to persistence of the signal from EFAS forecasts.

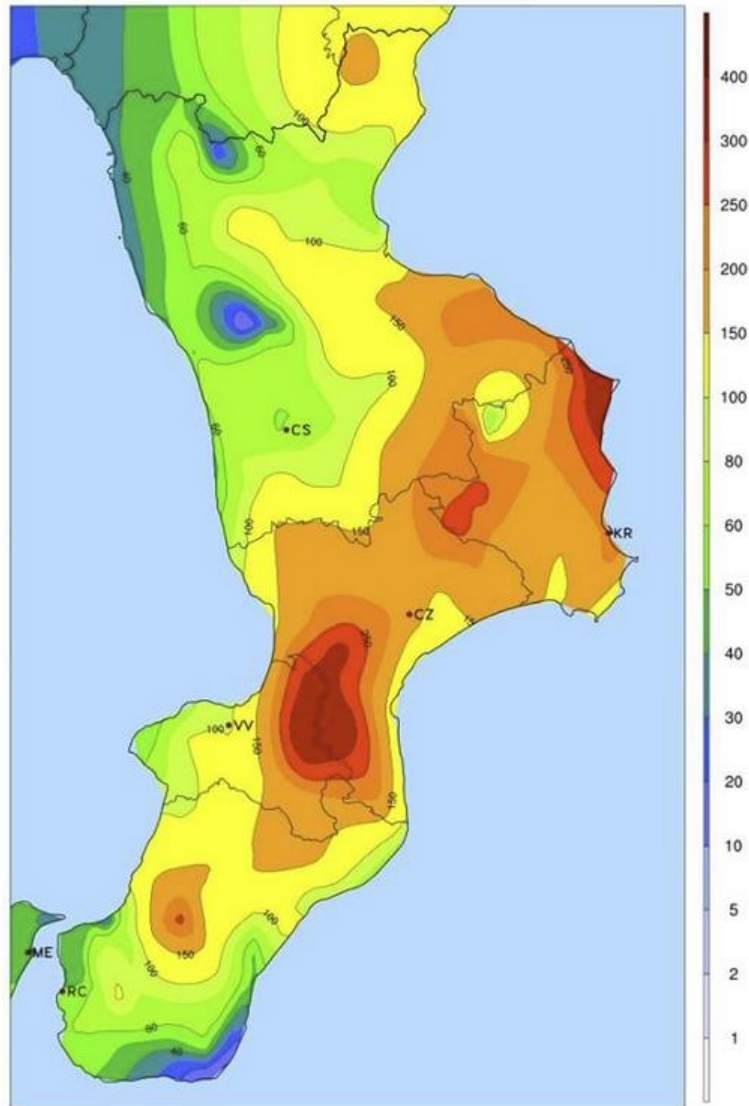

We analyzed the collection once it was stopped, at midnight on the 7th of October, after collecting 14.347 tweets.

(cold-start) using only labeled data in German, English, Spanish, and French

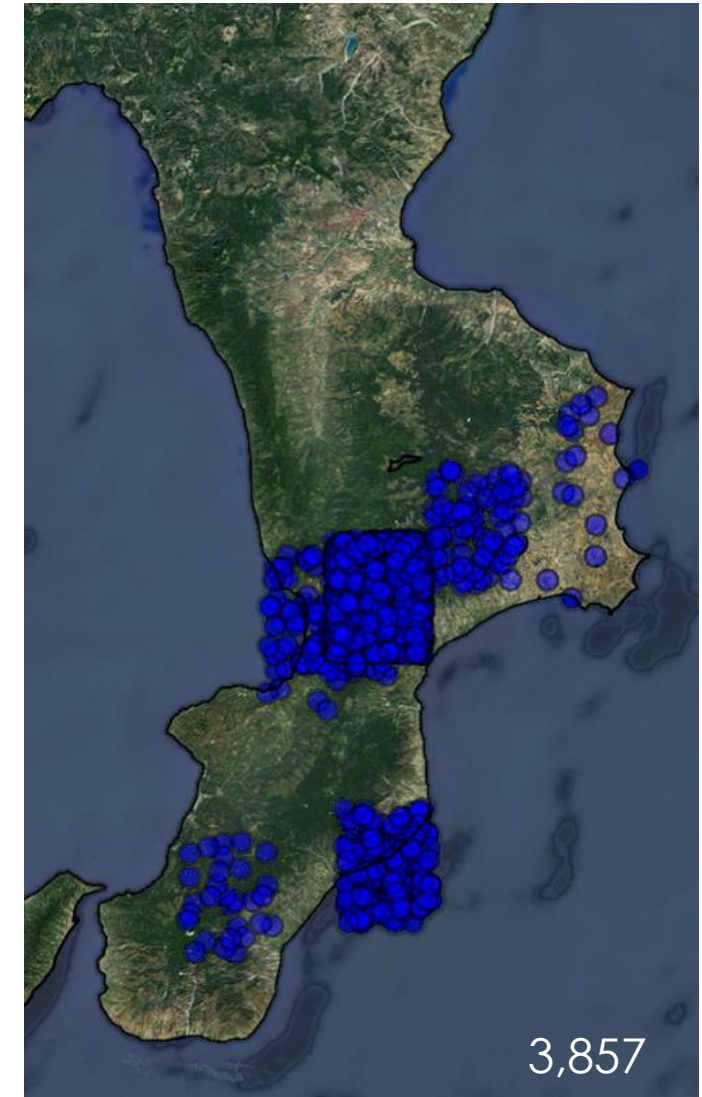

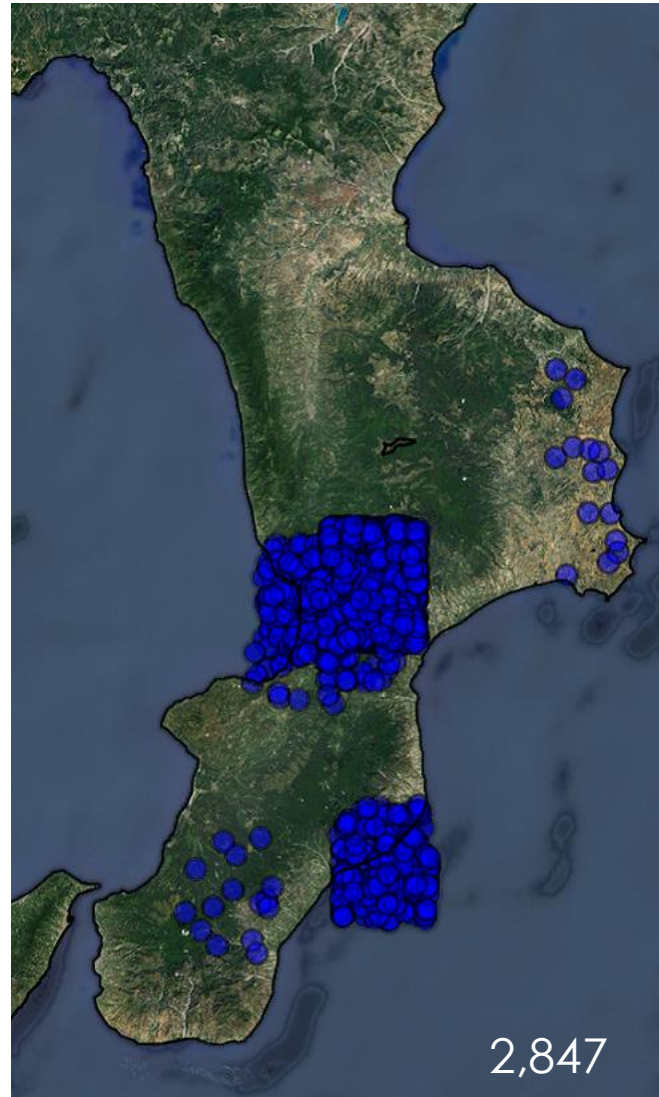

(warm-start) adding 300 manually labeled tweets in Italian from the collected dataset.
