BOOKS/MONOGRAPHS**2016 Big Crisis Data**

Cambridge University Press. 224 pages. [324 citations](#)

This book introduces methods for dealing with social media messages during time-critical events, with a focus on natural and man-made disasters. The first part focuses on the technical aspects of data processing, and follows computing disciplines of databases, natural language processing, machine learning, network analysis, and online algorithms. The second part focuses on the context in which data processing occurs, and is oriented to studies of information sciences and human factors, including crowdsourcing, human-computer interaction, computer-supported collaborative work, and information visualization.

2013 Information and Influence Propagation in Social Media (with W. Chen, L. Lakshmanan)

Synthesis Lectures on Data Management, Morgan and Claypool. 178 pages. [477 citations](#)

This monograph studies information diffusion models, including their main properties and extensions, as well as selected problems on information propagation, particularly influence maximization. It includes important practical problems such as learning weight influence, sparsifying influence networks, and acquiring and publishing research datasets and software.

2011 Adversarial Web Search (with B. Davison)

Foundations and Trends in Information Retrieval, NOW Publishers. 109 pages. [117 citations](#)

This monograph surveys the adversarial relationship between search engines and content providers willing to manipulate them. We show how search engine spammers create contents and links to lure visitors, and how web search engines try to detect these deceptive practices.
